## SKILLS

---

<b>Web Development:</b>	HTML, CSS, JavaScript, ReactJS, WordPress
<b>Database Technologies:</b>	MySQL, IBM i, IBM RD i
<b>Tools:</b>	Visual Studio Code, Github, Microsoft Office Suite, Visual Studio, StarUML, Eclipse, FTP Applications

## PROJECTS

---

### Personal Portfolio Page (React) <https://williamvuong.ca/>

- Created components such as: Header, Navigation, and Footer, to establish the page layout and utilized 'BrowserRouter' from 'react-router-dom' to route the Home, About, and Projects page
- Utilized CSS conditions to create an intuitive page design that is also mobile friendly
- Incorporated custom '@keyframes' to create subtle but also meaningful animations that enhanced the aesthetic of the website and it's flow when loading a new page and/or hovering on specific elements
- Utilized 'useState' to determine what menu icon should be displayed, and to set the current active tab

### Movie Database App (React) <https://stormy-shore-45972.herokuapp.com/>

- React 'useEffect' is used to fetch data from the API (<https://api.themoviedb.org>) every time the page is loaded or search query occurs – the query is passed into a function where the 'movieSearch' state is changed to the query in the search bar, then the API is reloaded with the 'movieSearch' query and rendered onto the page
- A hover effect is used when hovering over any movie selection to display its overview

### To-Do List App (React) <https://fast-bayou-13462.herokuapp.com/>

- Created functions that were passed into components as props that served the purpose of editing the tasks list
- React 'useStates' were used to display/close the add task button and to add new task components into the task 'useState' array

### Business Page (WordPress) [www.studio6ix.ca](http://www.studio6ix.ca)

- Utilized WordPress tools to create an intuitive website design that is easy for the user to navigate to view the services offered, staff members, and contact information of the business
- Utilized custom WordPress plugins such as Google Maps and slide show to help enhance the user's experience

## EDUCATION

---

### Computer Programming, Ontario College Diploma Program

*Seneca College | North York, ON | May 2017 – May 2019*

- Demonstrated the ability to implement different coding languages to complete various complex assignments in an Agile or Waterfall environment
- Demonstrated the understanding of the SDLC to properly analyse, gather requirements, design, and implement code to successfully satisfy a program's requirements
- Notable Courses: Web Programming, Database Design and SQL, Requirement Gathering Using Object Oriented Models, Analysis and Design, Object Oriented Programming

## WORK EXPERIENCE

---

### Manager

*Studio6ix | Vaughan, ON | April 2018 – Present*

- Establish trust and quality services which lead to creating strong client relationships
- Organize and maintain schedule for myself and other staff members to accommodate clients in an orderly manner that ensured punctuality without compromising quality
